Professional summary

8+ years in web products and e-commerce, including three years focused on storefront product displays. Experience implementing pixel-perfect designs from PSD and Figma, creating HTML and MJML email templates, and developing Shopify apps with Liquid and Remix. Also designed and built websites with Next.js, TypeScript, and Tailwind CSS, including registration and recurring subscription flows.

Professional experience

Performa.AI

2018 - now

Senior full stack developer with hands-on responsibility for storefront interfaces, e-commerce integrations, and operational dashboards.

- E-commerce frontend: during my first three years at Performa, I implemented product display rendering, placement, and styling, matching native storefront designs pixel for pixel. I also built custom displays from PSD and Figma, custom search interfaces, and frequently bought together displays.
- Delivery capacity: integrated three stores per day against the previous baseline of one, reaching five on days with overtime. I reused structures and styles, reviewed native components and insertion points before coding, and organized implementation into placement, rendering, styling, and behavior checks. Familiarity with themes and recurring issues reduced investigation time and rework. During one period, I handled the workload previously covered by three developers on my own.
- Shopify: developed three complete apps using Liquid and Remix. The apps did not reach production due to internal company issues.
- AI-assisted development: 1.5 years using AI agents at work. Currently using Codex connected to Performa MCP for e-commerce integrations, with code review, local checks, and API readback verification. Store testing is performed by the human operator.
- Email marketing: created HTML and MJML email templates for marketing campaigns.

Freelance Full Stack Developer

2017 - now

Built client websites and platforms, from requirements gathering through responsive implementation and production delivery.

- JSBJJ Kylemore: complete interface and platform development, with student acquisition, registration, authentication, recurring payments via GoCardless, and PostgreSQL with Prisma ORM.
- Unit 5: complete website design and responsive frontend implementation, with service information, social proof, and calls to action for contact.
