Professional summary

8+ years building web products and e-commerce integrations, with responsibility for architecture, testing, and production delivery. I connect systems and automate processes to reduce manual work, keep data reliable, and support operations at scale.

Professional experience

Performa.AI

2018 - now

Senior full stack developer and go-to engineer at Performa.AI, an intelligence and conversion platform for e-commerce. I define architecture for projects, apps, and tools, clarify scope with product teams, and handle development, testing, and deployment, including APIs, integrations, and interfaces such as the dashboard.

- Reliable order processing: I implemented idempotent webhook processing to prevent duplicate records in a service with more than 150 connected clients and thousands of requests per minute, keeping data consistent for recommendation evaluation.
- E-commerce integrations: I developed and maintained catalog and order synchronization with Shopify, Nuvemshop, Loja Integrada, Tray, VTEX, and Magazord, respecting API limits and automating updates to reduce manual intervention.
- APIs and security: an API backed by replicated MongoDB with JWT, HMAC, and rate limiting, serving thousands of daily accesses.
- Dashboard and interfaces: I built interfaces connected to the backend and integrations, translating product requirements into operational tools.
- Platform partnerships: technical discussions to obtain integration guidance and support partnership agreements.
- Support and clients: assistance to the support team, client-specific implementations, and resolution of complex technical issues.
- Mentoring: helping early-career professionals with day-to-day technical questions and decisions.
- Architecture and scale from the initial implementation: I plan projects, apps, and tools for efficiency and growth within their scope, taking responsibility for technical decisions, development, testing, and deployment.
- AI automations: WhatsApp workflows with AI, MCP, and RAG, alongside work on payments and auditing.

Freelance Full Stack Developer

2017 - now

My freelance experience includes websites, web platforms, corporate intranets, scheduling systems, and email marketing automations. I work from requirements gathering through production delivery, covering frontend, backend, integrations, and maintenance.

- Corporate intranet: an internal communication system with a photo archive and a noticeboard.
- Email marketing: a sending queue built with BullMQ, Node.js, and Amazon SES, deployed to a DigitalOcean VPS.
- Dental clinic: an appointment scheduling system with management of doctors, staff, and available time slots.
- JSBJJ Kylemore: complete interface and platform development, with student acquisition, registration, authentication, recurring payments via GoCardless, and PostgreSQL with Prisma ORM.
- Unit 5: complete website design and responsive frontend implementation, with service information, social proof, and calls to action for contact.
